Faculty Positions (Non-Tenure Track): Graduate and Undergraduate Public Health Programs

This is an exciting time for the College of Public Health (CPH) at Temple University. We are experiencing unprecedented growth in our enrollment, graduate programs and research. Over the next four years, the College will expand its footprint with a new building and add 50 faculty members across the 9 public health and health-related professions departments. In 2014, Dean Laura A. Siminoff, an eminent public health social scientist who has been continuously funded by NIH for 25 years, joined the College and under her leadership, CPH is engaging in a realignment of interdisciplinary research and academic programming within Public Health.

We are seeking innovative and experienced non-tenure track faculty to teach across the curriculum for our undergraduate, MPH, doctoral public health programs. Although we are seeking faculty with specific skill sets and credentials for several departments, we welcome applications from persons who can teach in multiple areas of the curriculum.

- **Applied Biostatistics and Research Methodology:** Applicants should have a Ph.D. in biostatistics or a related discipline (e.g., statistics, computer science, engineering). Non-tenure track faculty in Biostatistics divide their time between teaching undergraduate and graduate courses in biostatistics and supporting the College’s research infrastructure through biostatistical consultation and assistance with research design and analysis. Area of specialization is open; however, candidates should possess a sufficiently broad skill set to serve a diverse set of research needs (e.g., experimental and observational research, risk assessment, research design, longitudinal analysis, psychometrics). Balance between teaching and research support will depend on applicant qualifications and College needs. Candidates must demonstrate strengths in statistical programming and data management.

- **Epidemiology:** Applicants should have a Ph.D. in Epidemiology or related field. Non-tenure track faculty in Epidemiology will divide their time between teaching undergraduate and graduate courses in epidemiology and biostatistics, and support the College’s research infrastructure through collaborations. Area of specialization within epidemiology is open; however, the successful candidate will have demonstrated teaching expertise in chronic disease epidemiology, or infectious disease epidemiology. Demonstrated experience with teaching epidemiology and biostatistics to undergraduates is also preferred. Although the position is primarily designed for teaching faculty, assignment to research support is possible dependent on applicant qualifications and College needs.

- **Social and Behavioral Sciences:** Applicants are required to have an MPH (or have a related master’s degree with demonstrated teaching experience in public health). An earned Ph.D. is preferred, but not required. Applicants with experience in public health practice are especially welcome; areas of expertise are open, but knowledge of physical activity, public health nutrition, alcohol and substance abuse, human sexuality, public health program planning and evaluation, and health disparities are a plus. Faculty hired for this position will have a teaching assignment primarily in the undergraduate program. However, applicants experienced or able to teach across the curriculum for the undergraduate and MPH programs, including in health policy and administration, should indicate this quality. Online teaching experience is also a plus.

Temple University is an urban, research-intensive university located in Philadelphia. Temple is the 6th-largest provider of professional education in the country and includes Schools of Law, Medicine, Pharmacy, Podiatry, and Dentistry in addition to research centers including the NCI-designated Fox Chase Cancer Center. The College of Public Health enrolls 4,500 students across our departments with a faculty of 155. We have 40 faculty in the Departments of Epidemiology & Biostatistics, Social & Behavioral Sciences and Health Services Administration and Policy. There are 400 students in our undergraduate and graduate public health programs. We are proud to have one of the first undergraduate public health programs. All public health academic programs are fully accredited by the Council on Education in Public Health (CEPH) and we are seeking School accreditation.

Appointment for these non-tenure track faculty positions may be made at the rank of Instructor, Assistant, Associate or Full Professor, dependent on qualifications. Salary and benefits are competitive and will be commensurate with credentials and experience. Applicants should send a letter of interest detailing teaching experience or preparation and curriculum vitae to Phsearch@temple.edu. Additional materials including a research statement for applicants in Biostatistics and Epidemiology are welcome. Review of applications will begin immediately and continue until the positions are filled.

*Temple University is an equal opportunity/affirmative action institution. People of color, women, veterans, and persons with disabilities are encouraged to apply.*
