THIS IS AN EXCITING TIME FOR THE COLLEGE OF PUBLIC HEALTH.
Last year, Dr. Laura Siminoff, a well-known researcher and a national and international expert on treatment decision-making and communication, informed consent and health disparities in cancer outcomes and organ and tissue donation, was appointed as the College’s Dean. In October, the College officially changed its name from the College of Health Professions and Social Work to the College of Public Health. Within three years, Temple’s College of Public Health will become one of only three accredited schools of public health in the state.

An accredited College of Public Health will benefit all students through increased funding opportunities. Accredited schools of public health have access to dedicated funds, such as training grants from the Health Resources and Services Administration and the Centers for Disease Control and Prevention.

WE ARE GROWING, QUICKLY.
The College of Public Health has 4,600 students and 150 faculty across eight departments. Over the next three years, the College will expand its footprint with a new building on main campus and add an additional 40 faculty members focused exclusively on research.

New offerings will include a PhD in epidemiology and two new masters of public health with concentrations in epidemiology and applied biostatistics. To provide students with broader insights into public health and inter-professional practice, greater emphasis will be placed on courses offered across departments or co-taught by faculty in different departments. The College is also increasing the number of degrees and courses offered online.

OUR INFLUENCE EXTENDS BEYOND CAMPUS.
Faculty and student teams have created unique programs for children with autism in Philadelphia focused on engagement through physical activity; used technology to effectively respond to homelessness; worked to ease the restoration of prisoners to life outside of jails and prisons; advanced the understanding of concussion from neurons to behavior; introduced virtual reality to help motor coordination for brain-injured patients; prevented childhood obesity through intervention programs; improved opportunities for people with psychiatric disabilities; helped to reduce asthma symptoms for children; combatted the city’s high adult illiteracy rate by teaching young children to read; and much more.

We hope you can join us in celebrating our successes and focusing on our future on Thursday, February 19th. If you can’t make it, please help us keep in touch with you.
