Title: Early detection and treatment of emerging cognitive linguistic impairment in minority cognitive aging and primary progressive aphasia

This R01 competitive renewal is investigating the effectiveness of language therapy paired with transcranial direct current stimulation in semantic variant primary progressive aphasia (svPPA) and longitudinal prediction of the conversion to mild cognitive impairment in a prospective cohort of underrepresented minority older adults.

Role: Principal Investigator; Total approximate costs (direct & indirect): \$2,000,000

- Temple University Office of the Vice President for Research (OVPR) & State of Pennsylvania 2018-19
 Title: Modulating Individual Differences in Reward Sensitivity with tDCS

 Title: Semantic memory and language learning in Alzheimer's Disease and Semantic Dementia
 We investigated effectiveness of a language therapy for Alzheimer's Disease and Frontotemporal Dementia involving training a finite vocabulary of 100 words during early stage dementia and gauging maintenance and functional benefits as disease severity worsens. We correlated neural and behavioral markers of treatment effectiveness and investigating the nature of the semantic impairment associated with these patient populations using eyetracking and structural magnetic resonance imaging, Role: PI; Total approximate costs (direct & indirect): \$2,500,000.
